

Complete the Room Experience Report

Profile link:[TryHackMe | bhavanasivaganga](#)

The screenshot shows a user profile for 'bhavanasivaganga' on the TryHackMe platform. The profile header includes a circular profile picture, the username 'bhavanasivaganga', and a badge '[0x3][PATHFINDER]' with an Indian flag icon. To the right, statistics are displayed: Rank 785056, Badges 1, Streak 0, and Completed rooms 5. Below the header, a navigation bar lists various sections: Completed rooms (active), Certificates, Skills matrix, Badges, Created rooms, Yearly activity, and Tickets. The main content area displays five room cards: 'Linux Fundamentals Part 1' (Linux icon), 'Welcome' (TryHackMe logo), 'OpenVPN' (OpenVPN icon), 'Pickle Rick' (Rick and Morty icon), and 'Nmap' (Nmap icon). Each card provides a brief description, a difficulty level (Easy), and buttons for 'Free', 'Walkthrough', and 'Challenge'.

Room Name	Icon	Description	Difficulty	Buttons
Linux Fundamentals Part 1	Linux penguin	Embark on the journey of learning the fundamentals of Linux. Learn to run some of the first essential commands on an interactive terminal.	Easy	Free, Walkthrough
Welcome	TryHackMe logo	Learn how to use a TryHackMe room to start your upskilling in cyber security.	Easy	Free, Walkthrough
OpenVPN	OpenVPN logo	A guide to connecting to our network using OpenVPN.	Easy	Free, Walkthrough
Pickle Rick	Rick and Morty	A Rick and Morty CTF. Help turn Rick back into a human!	Easy	Free, Challenge
Nmap	Nmap logo	An in depth look at scanning with Nmap, a powerful network scanning tool.	Easy	Free, Walkthrough

So, I took on the Further Nmap room on TryHackMe, and wow..Nmap is way cooler than I thought! Before this, I just knew it as the tool to poke around and find open ports. But turns out, it's like a Swiss Army knife for network scanning.

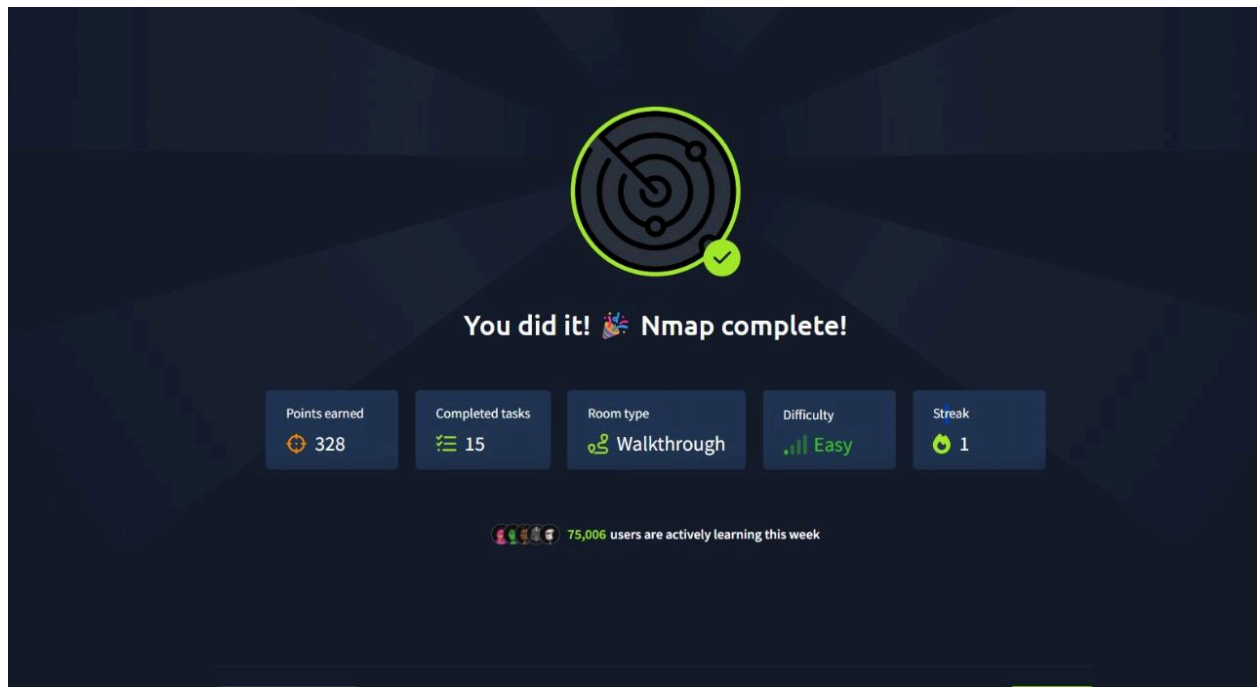

I started simple ... just scanning ports to see what was open. Then I tried the `-sV` flag to peek behind the curtain and figure out what services were running and their versions. It felt like I was hacking something hehhe!

Next, I went full detective mode with the `-O` option to guess the target's operating system. It's crazy how Nmap can do that just by analyzing responses. I half expected it to tell me what breakfast the target had!

The fun part was running scripts with `-sC`. These little scripts gave me extra juicy info and even hinted at possible vulnerabilities. Nmap isn't just scanning — it's snooping around like a pro spy.

Oh, and I learned to save my scan results in different formats (`-oN`, `-oX`)

Honestly, at first, all the commands and results looked like alphabet soup, but the more I practiced, the clearer it got.
