

Task 6:

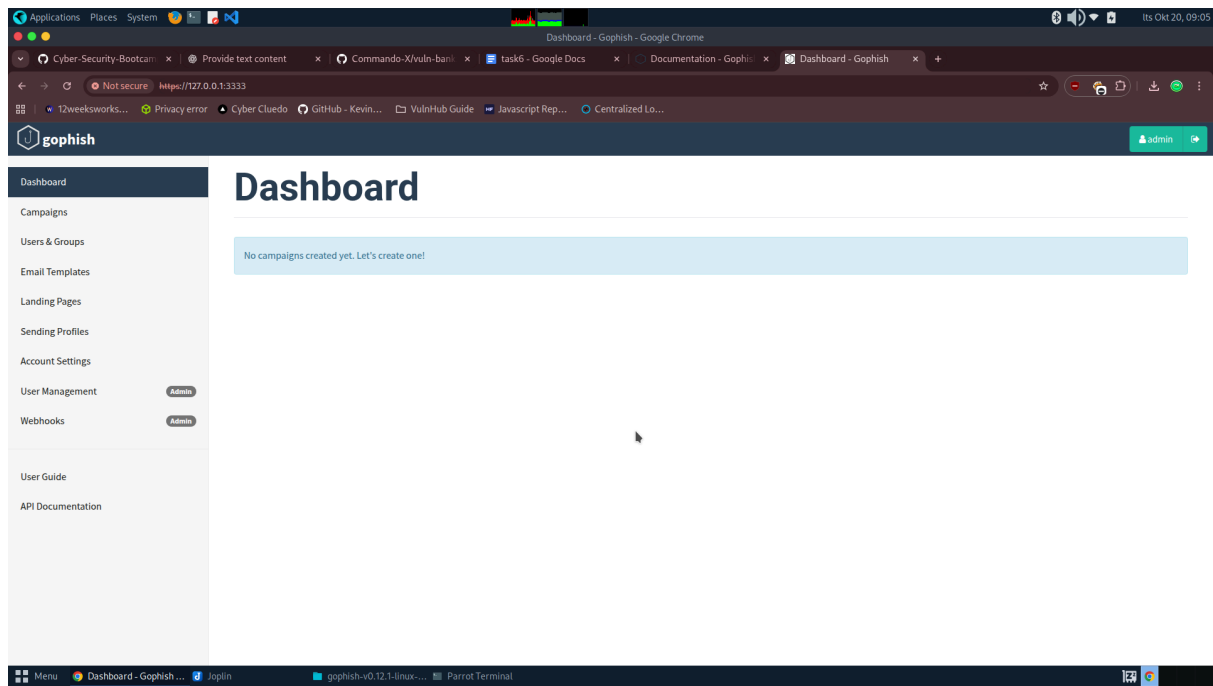

abinrd@mulearn

Gophish is a powerful, open-source phishing framework designed for businesses and penetration testers to conduct real-world phishing simulations in a controlled environment. It helps organizations test, measure, and improve their employees' susceptibility to phishing attacks and enhance their overall cybersecurity awareness and defenses.

Setting up gophish

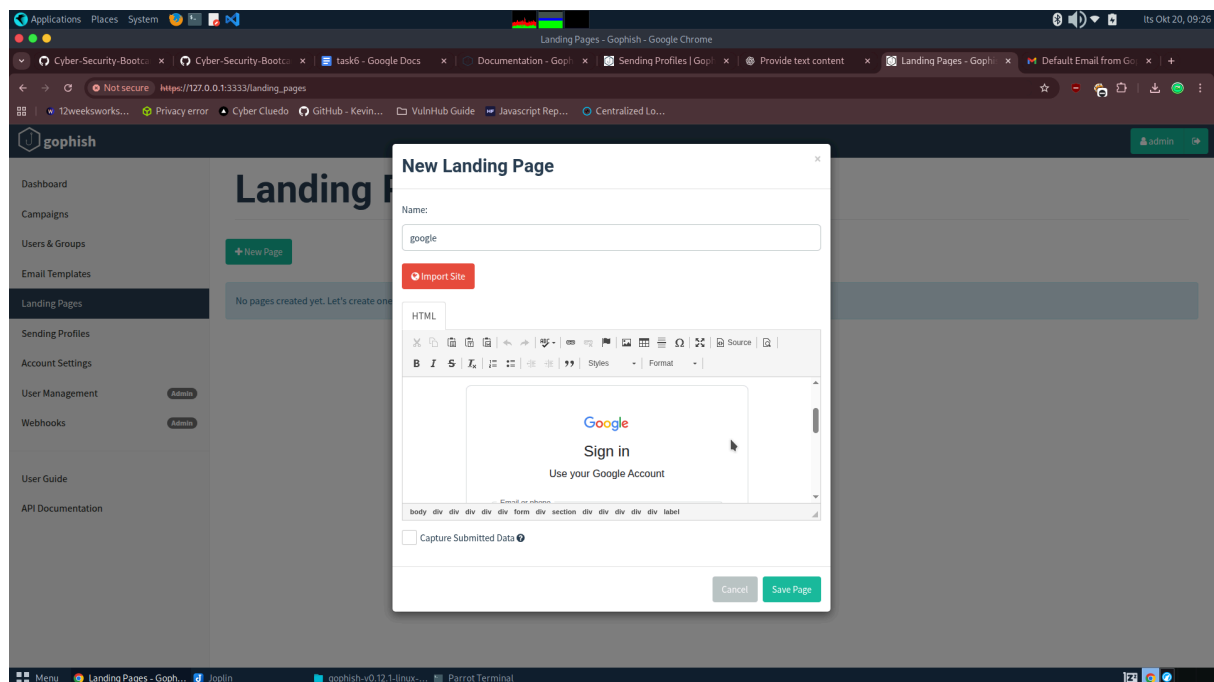

Signed-in and redirected to Dashboard

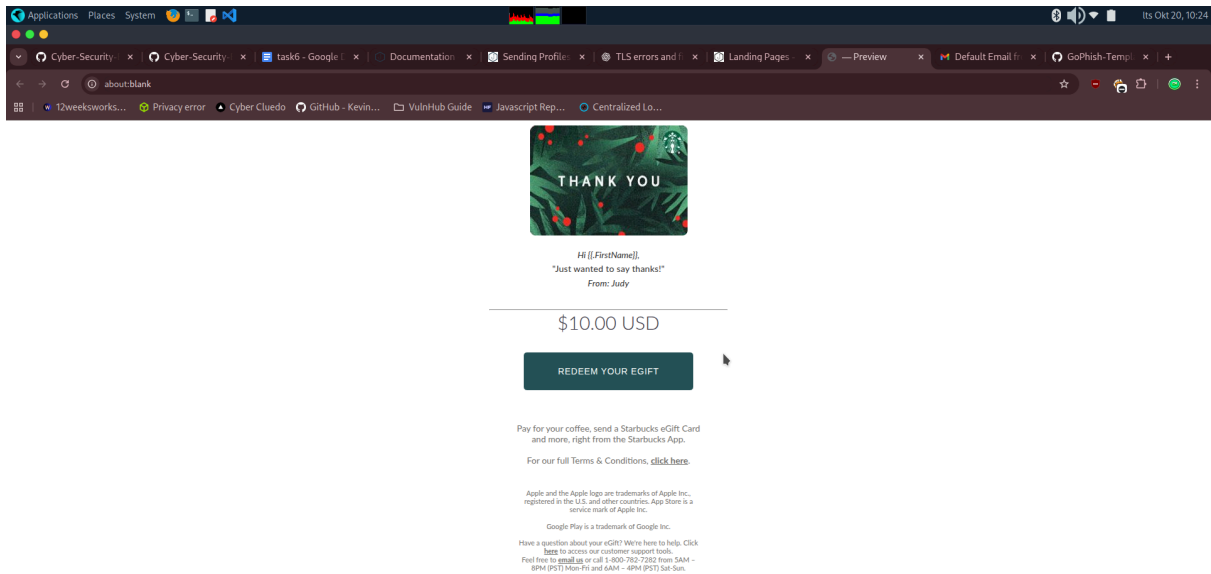

Setup a Sending Profile

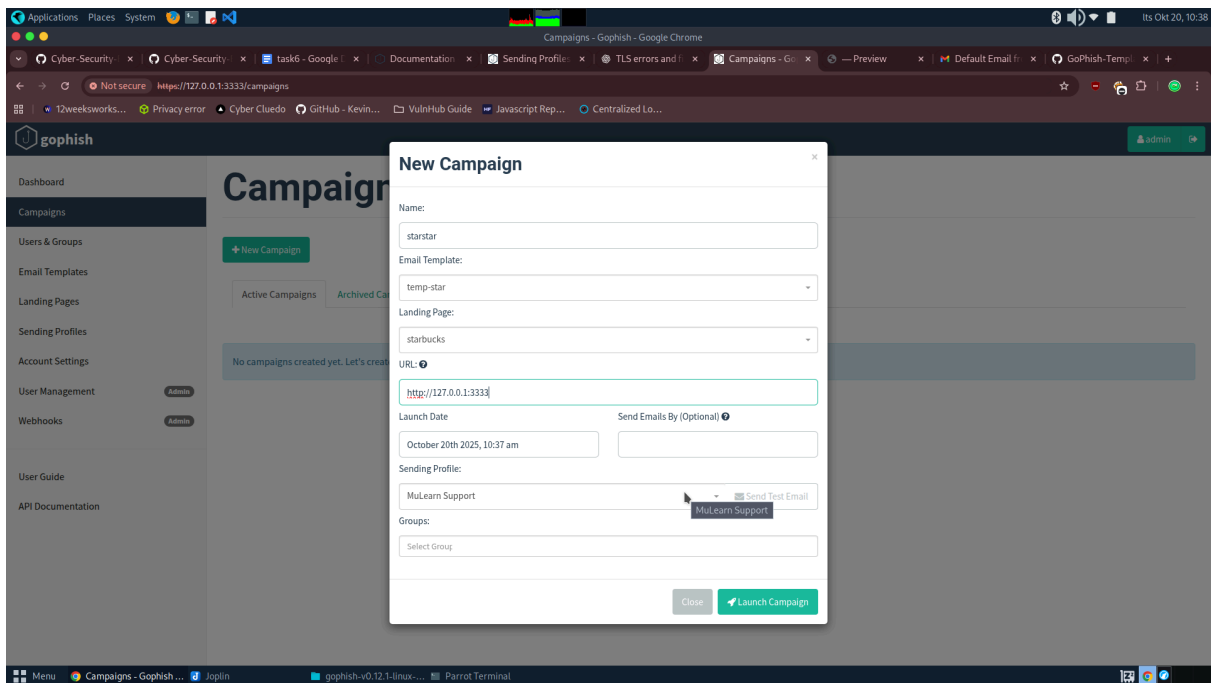

Well it worked demo worked now lets setup the email template and landing page template

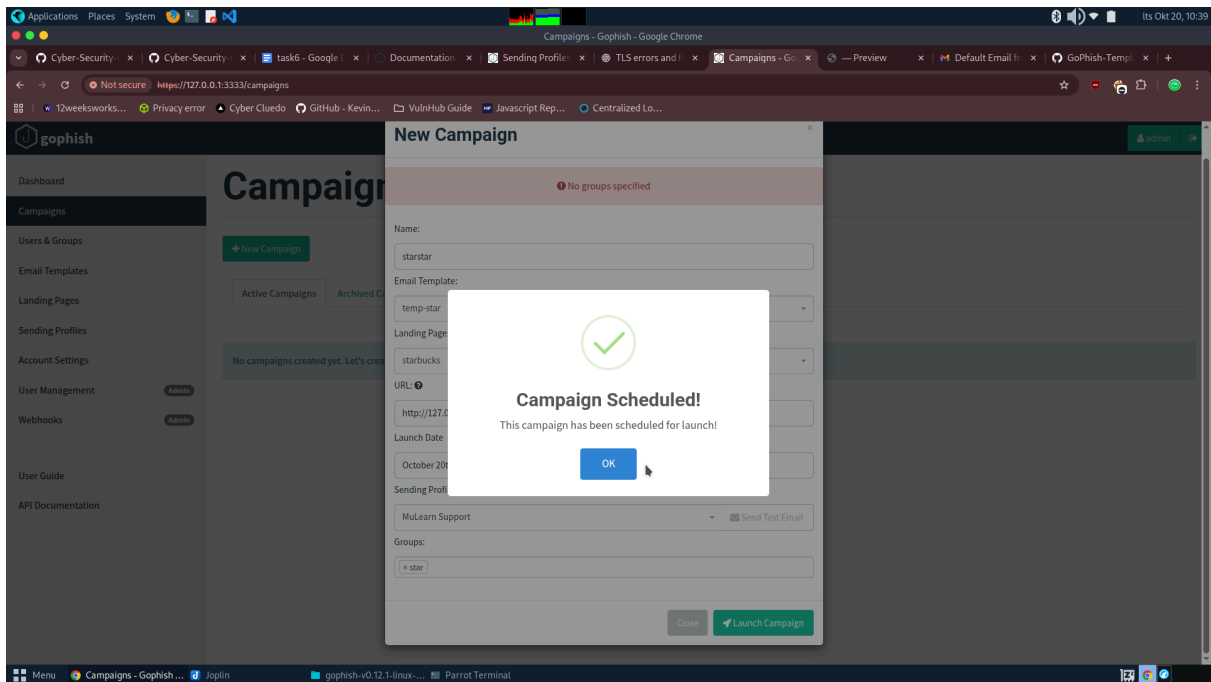

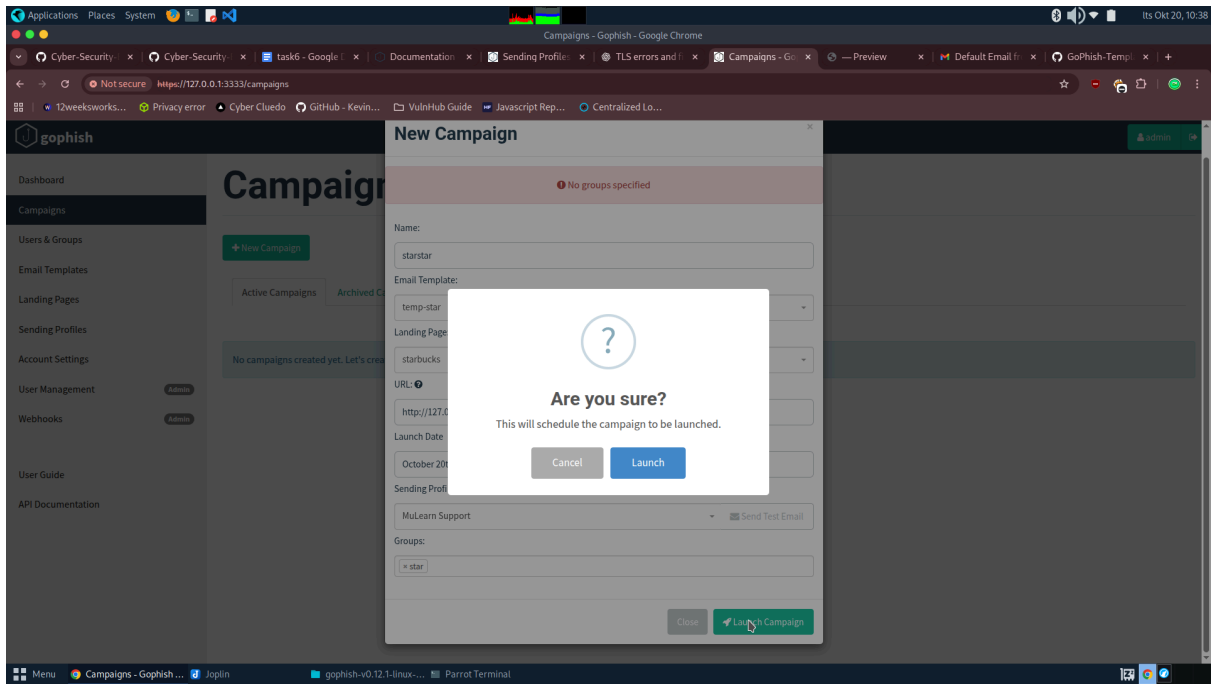

Landing page i took a Starbucks theme found a template in github (screenshot differs changed afterwhile)

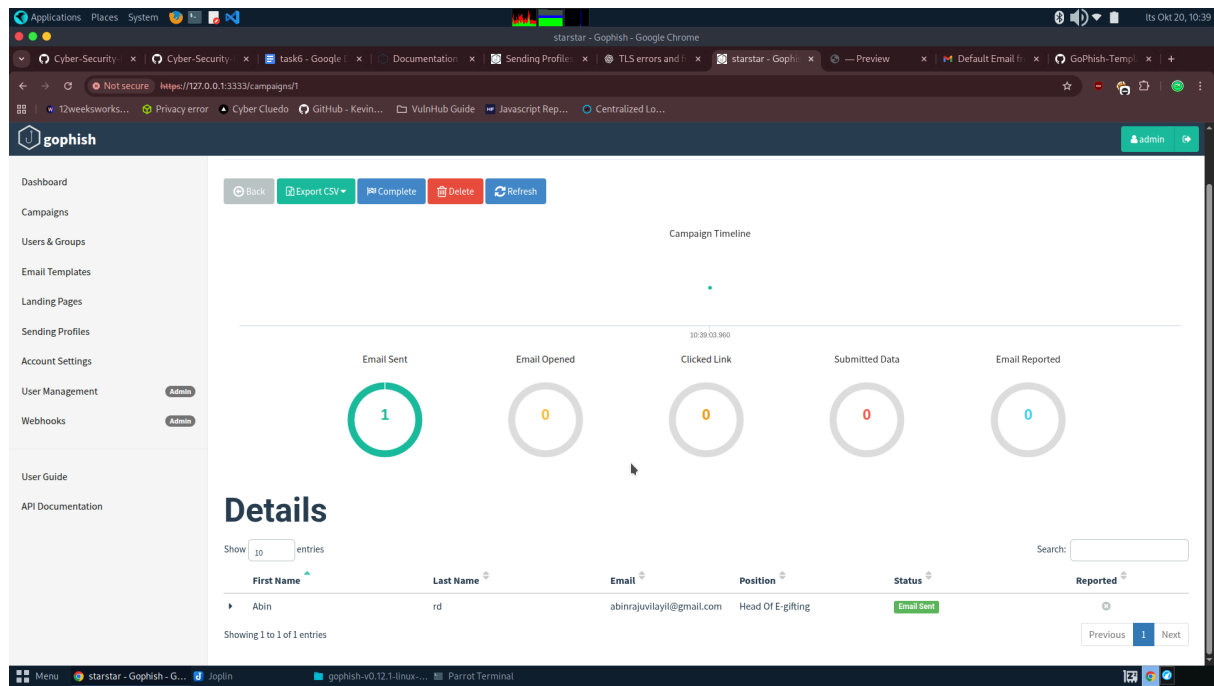

Preview of what the landing page looks like Also do setup the Email template(forgot to take screenshot)

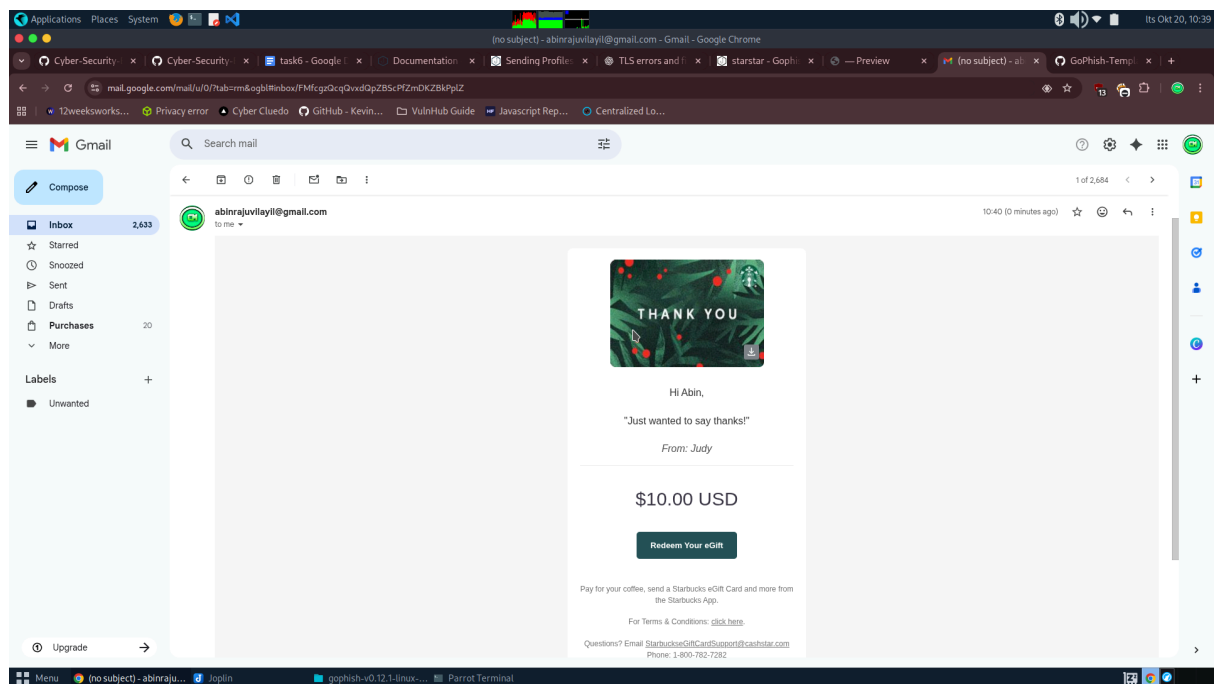

Start a Campaign give necessary information

Ye this is the dashboard after sending the mails it updates each time when someone opens the mail, gives data etc.

Here is the mail I received from me tryna phish myself . Be careful out there.
