

Task 1

CTF ROOM IN <https://tryhackme.com/> .

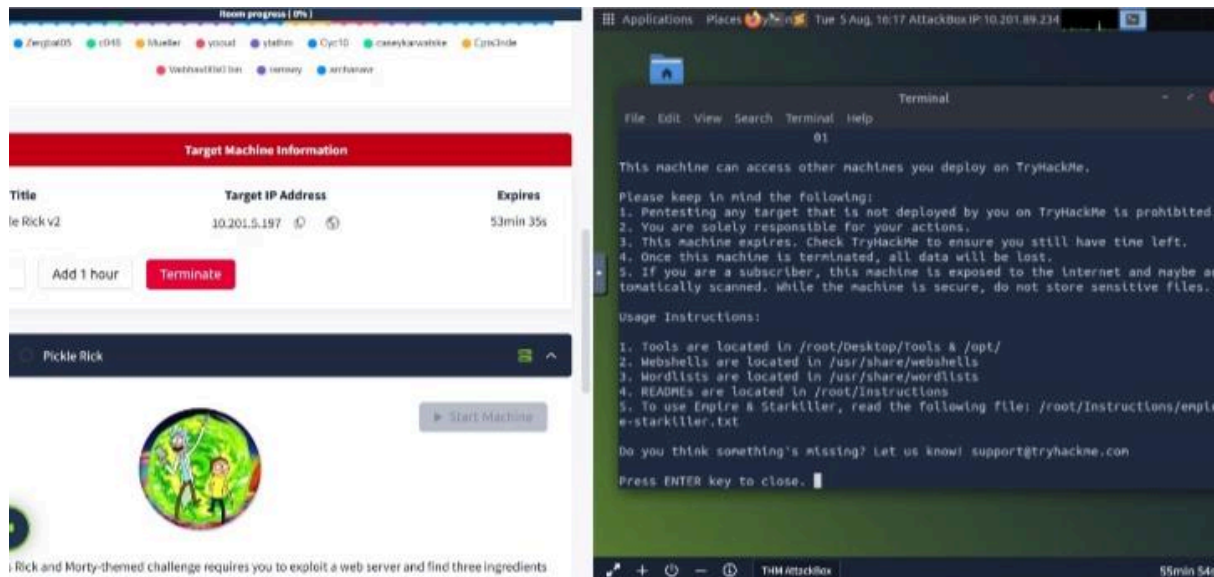

Pickle Rick

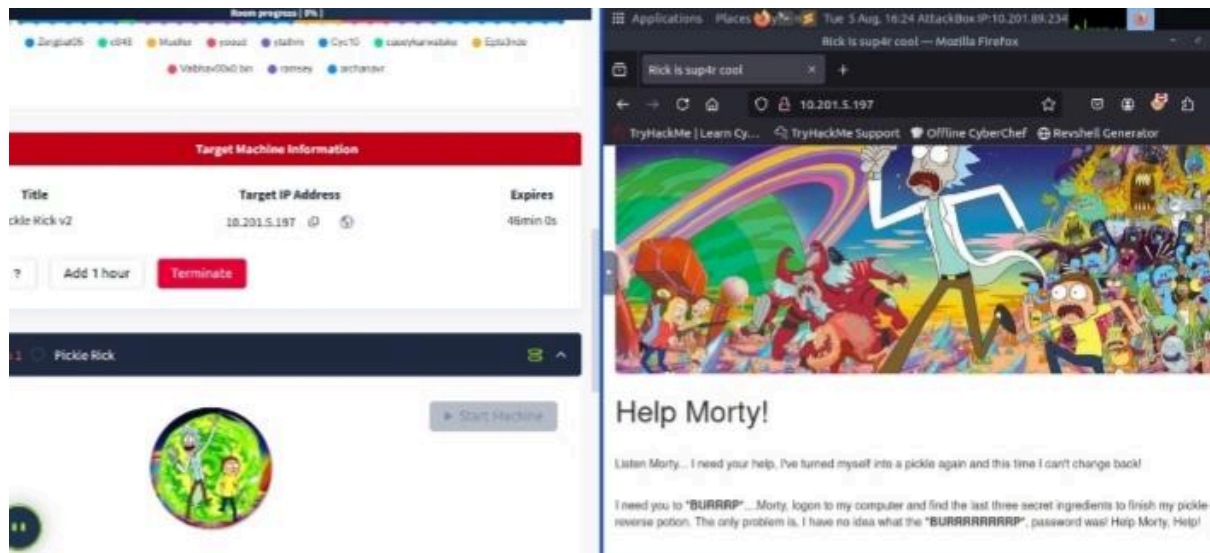

This is one of the rooms which is marked as easy in tryhackme.

After joining the room and activating the machine. The time has started and 1 hour is the time to complete the room. After that the machine will stop and we have to start again from the first if we are not a subscriber. And I used Attackbox to do the task.

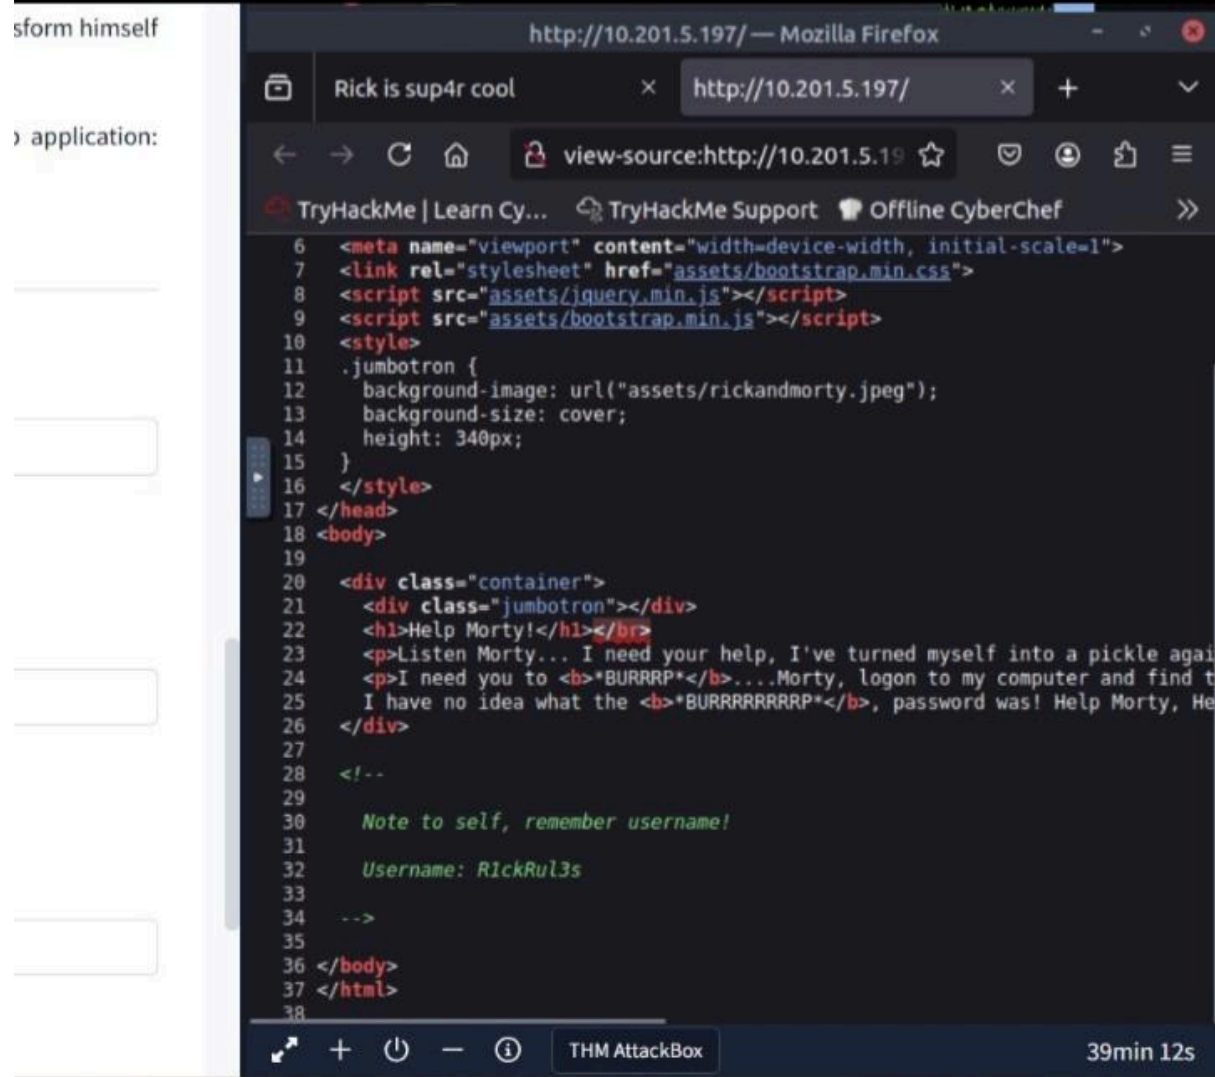

After activating instructions are given

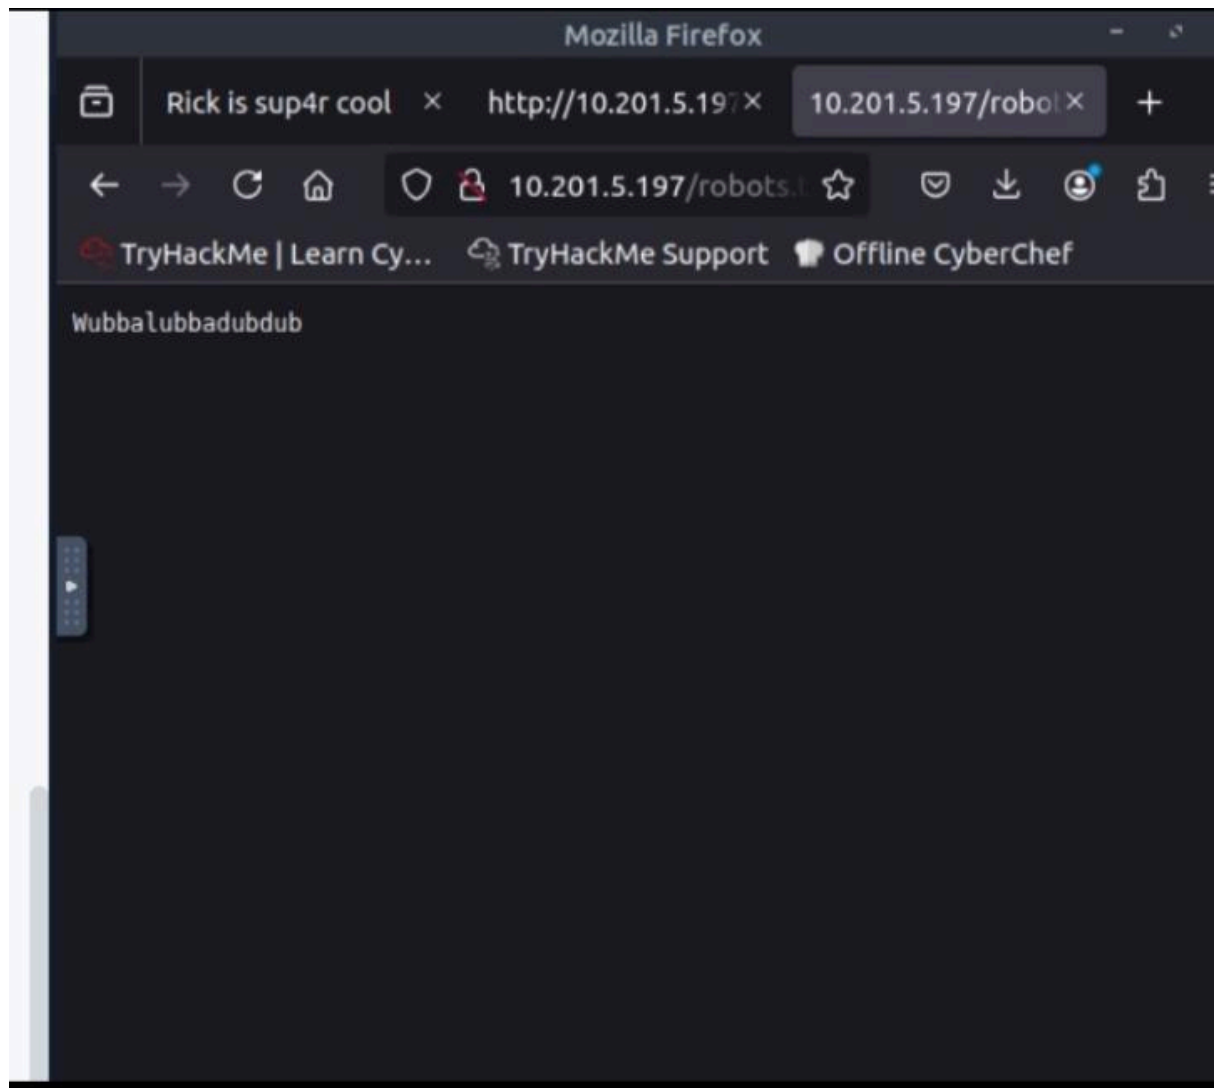

Then we run the ip address in the browser of the attackbox which is given in the challenge itself.

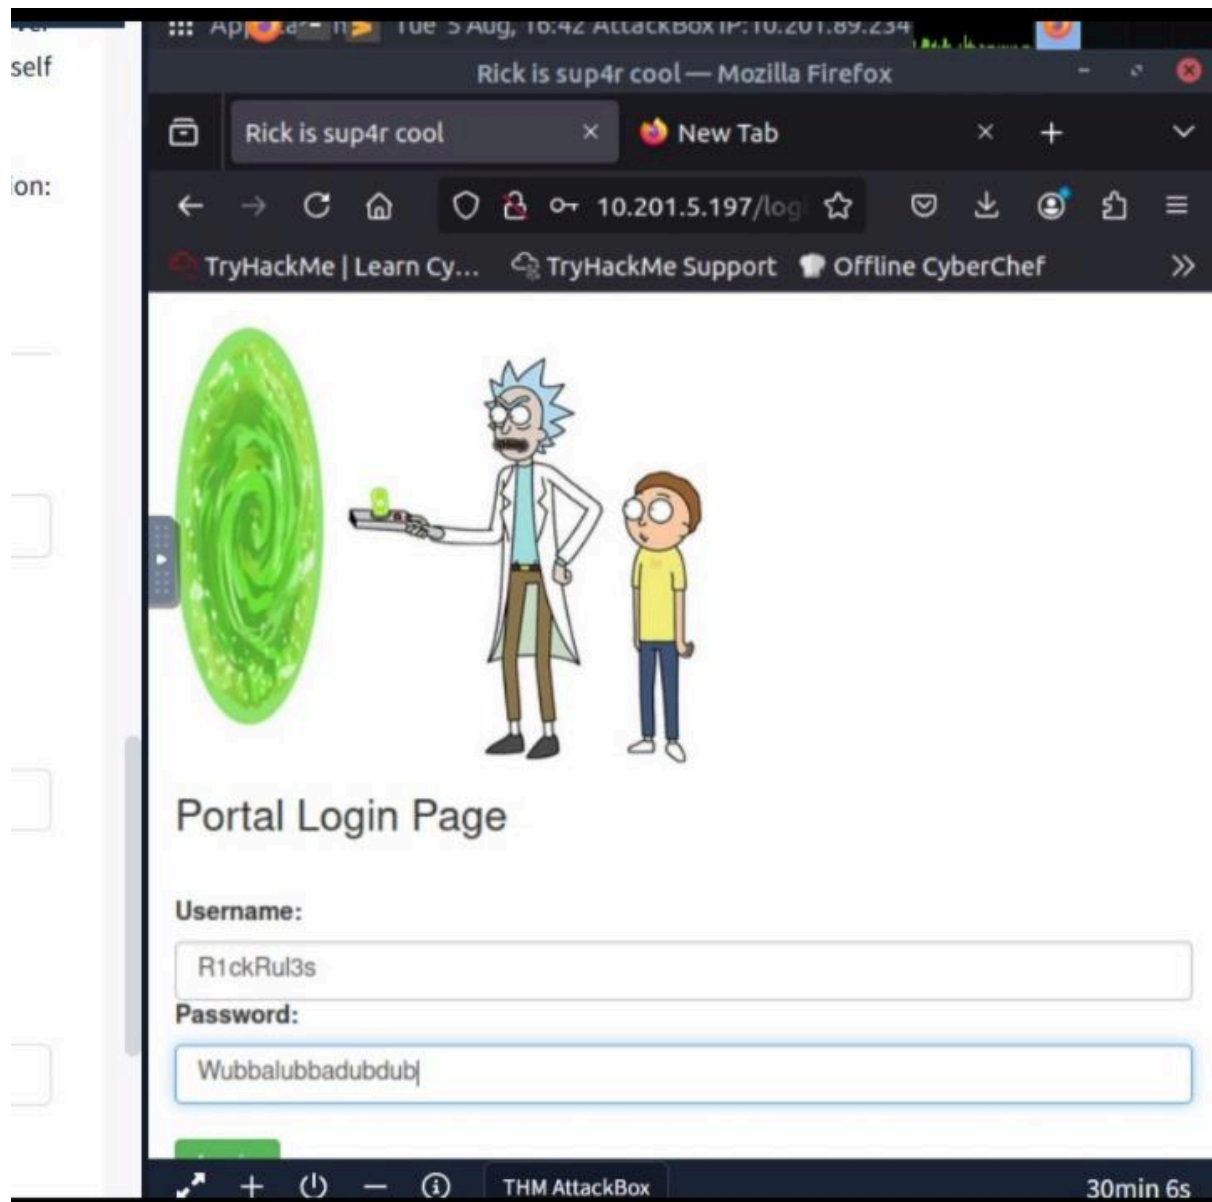

Then we got into the page called rick is super cool. And

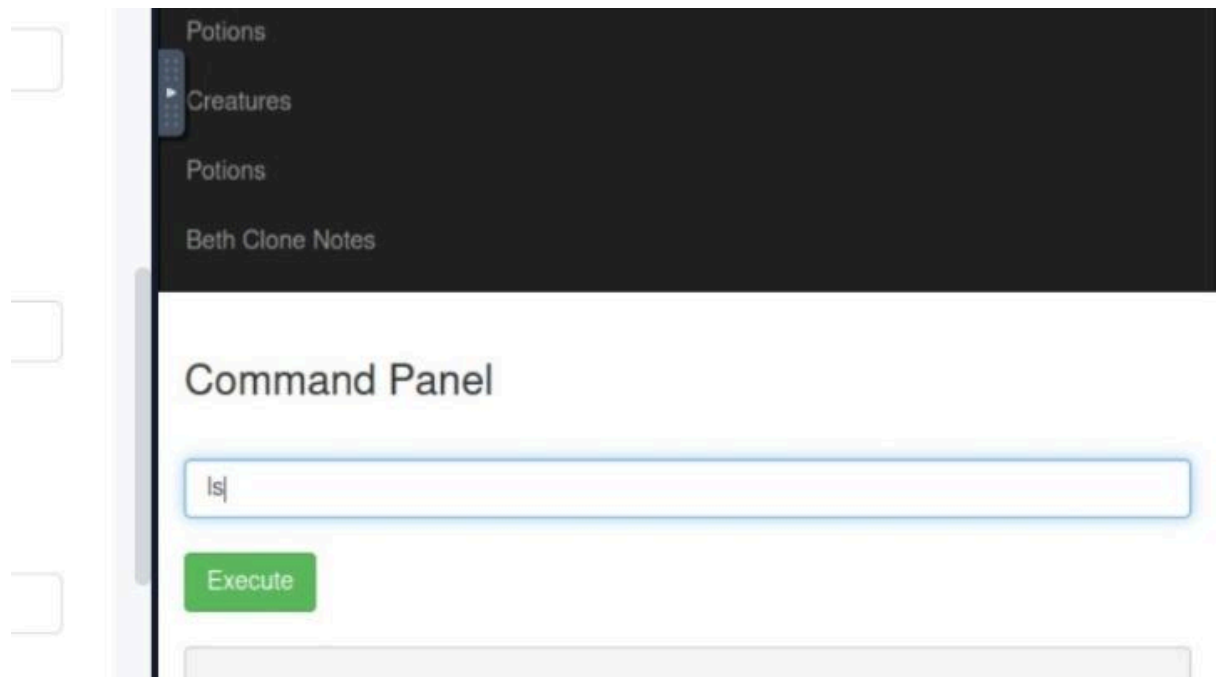

The view source of that page gave us the username. And then

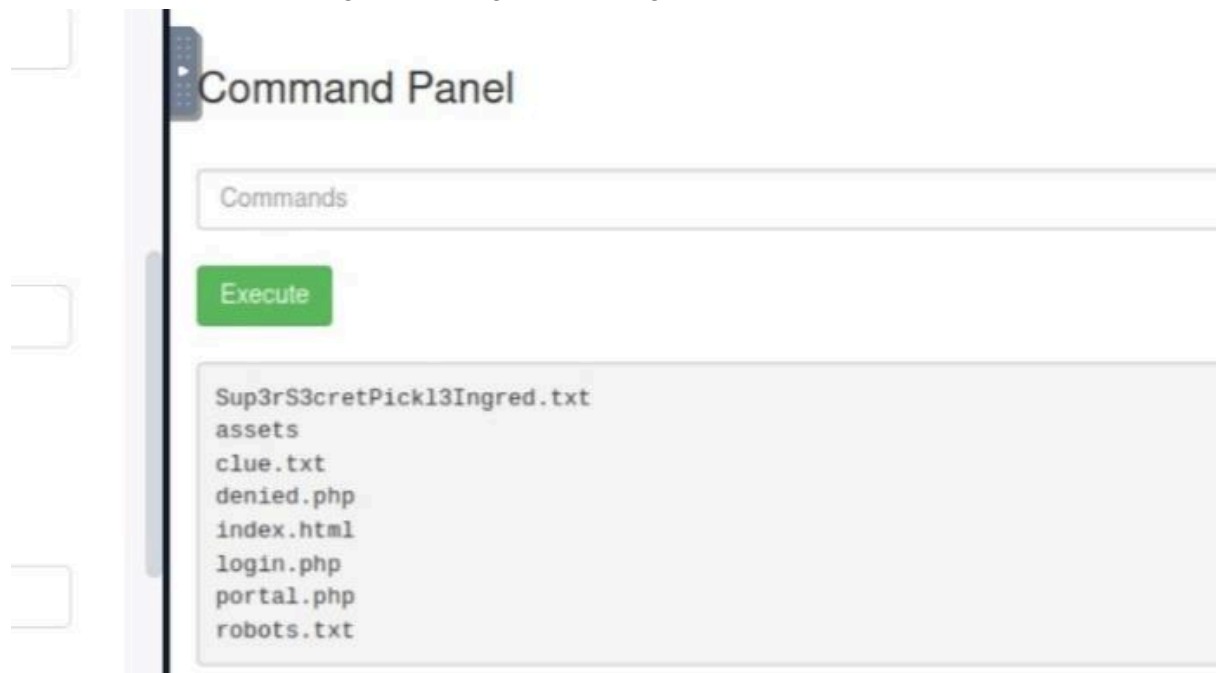

The robot.txt command gave us the password.

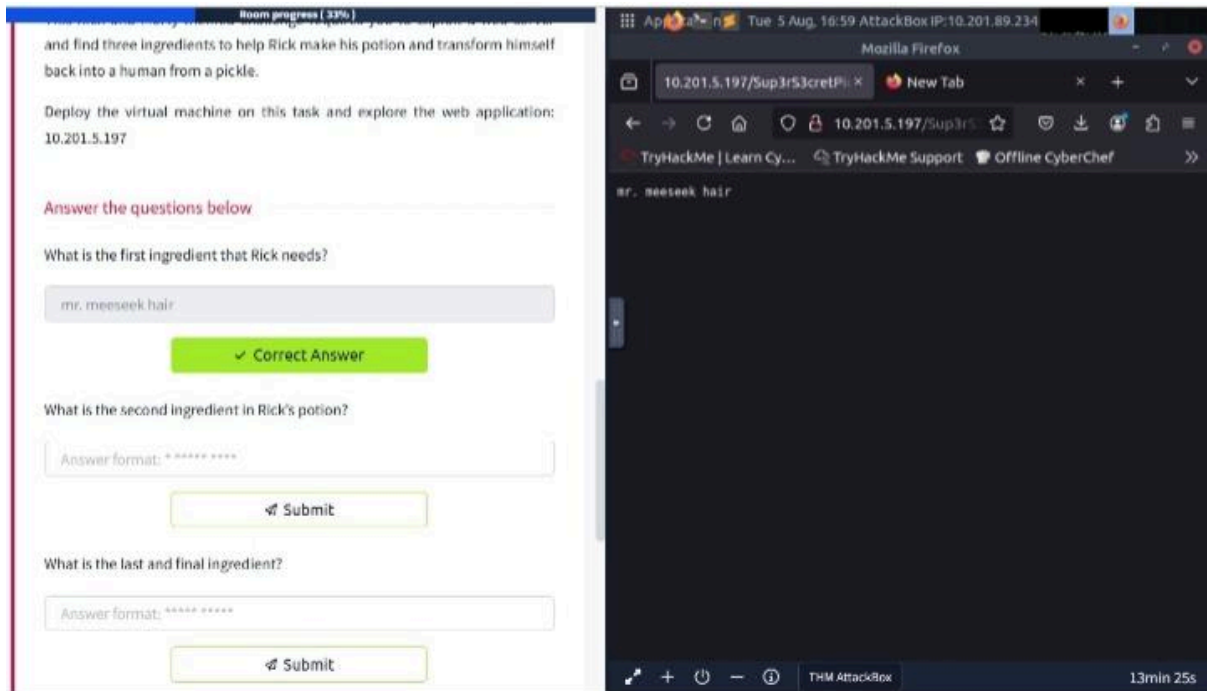

Using the login.php command we got into the login page and gave the username and password to login.

We are directed to this page as we login and using the ls command on the command panel

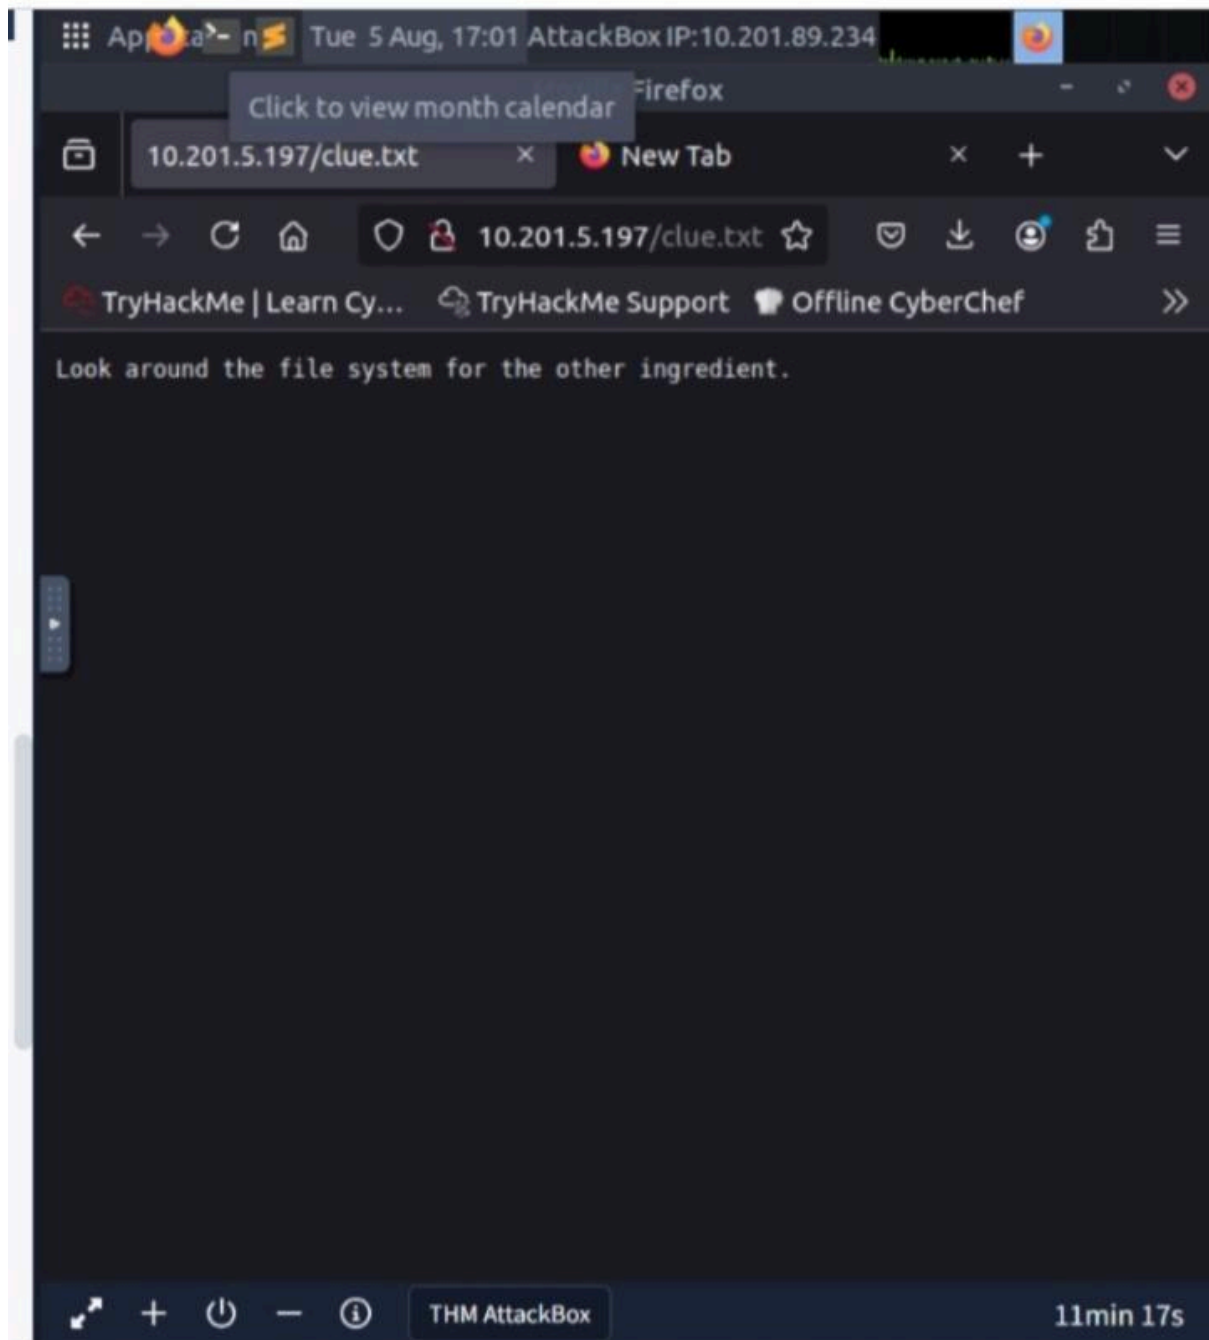

We got many commands to execute on the browser.

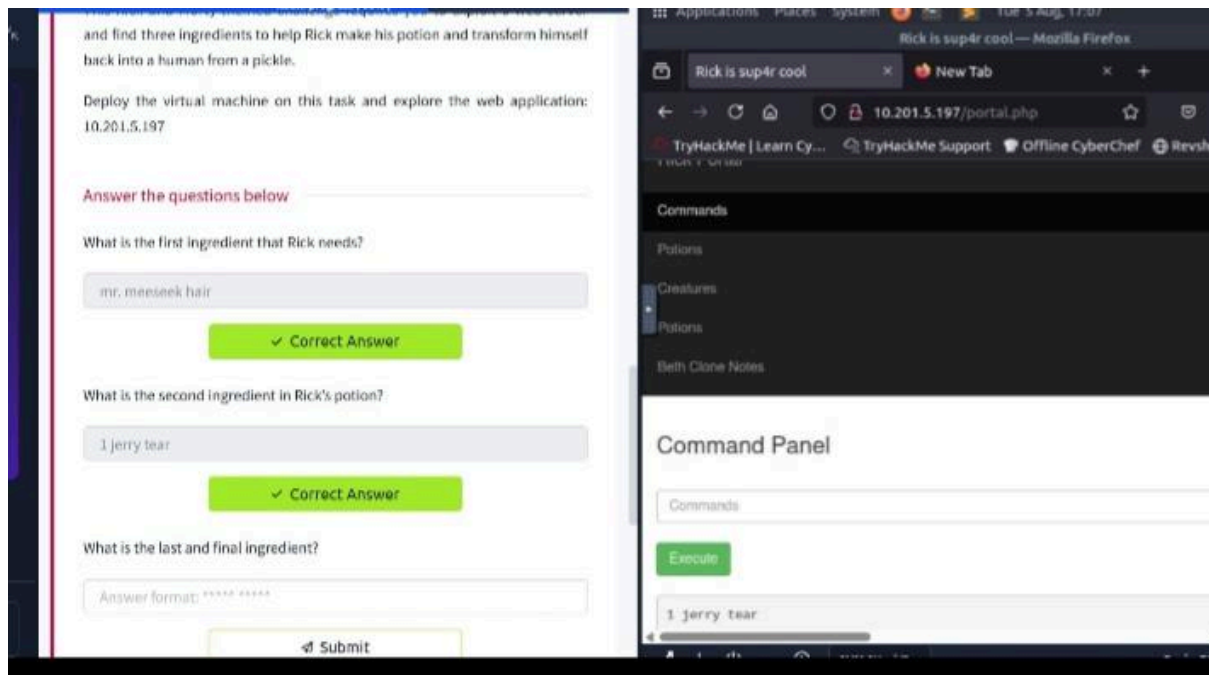

Using the first one Sup3rS3cretPick13Ingred.txt we got the first ingredient as mr. meeseek hair

Then

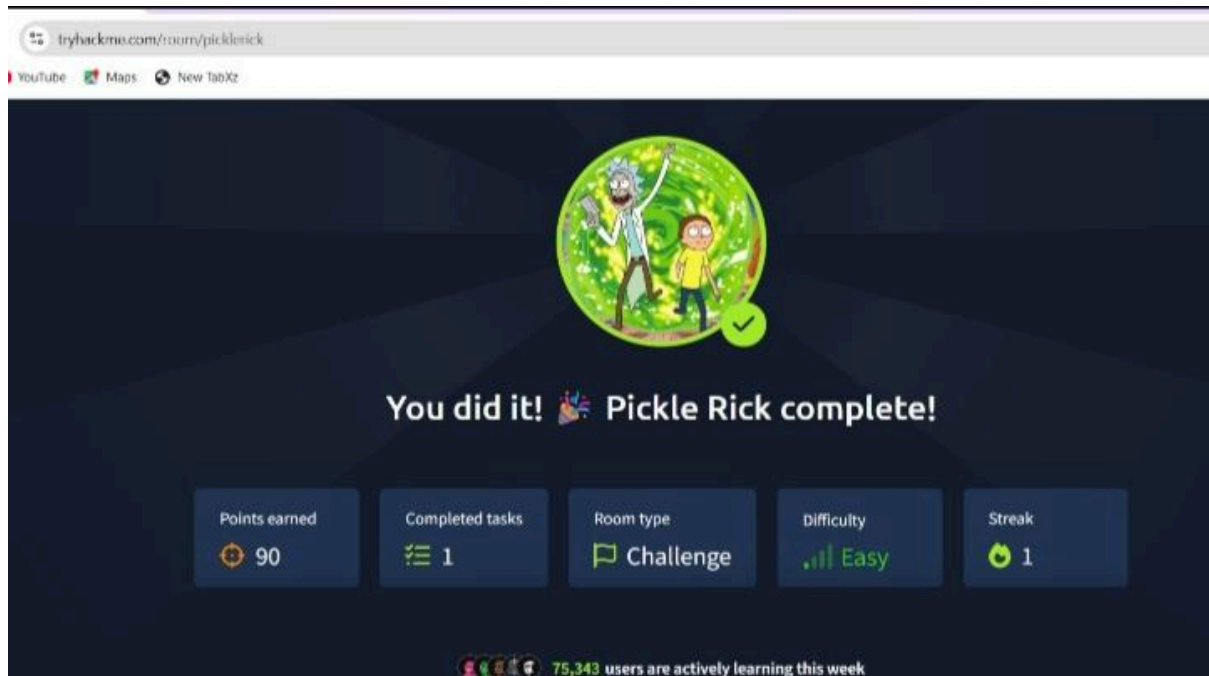

Using the next one we only got this .

After a few trials on command panel with the command of second ingredient we got 2nd one as

1 jerry tear by using the command
 Stings"/home/ rick /second ingredient" on the command panel.
 The using the command
 sudo strings/root/3rd.txt we got the 3rd one as fleeb juice . (*unable to provide the screenshot)

After submitting the 3rd one we are directed to a page which

Says we complete the task and other details about points we earned and etc.
